The DP-200USB is a fully automatic record player that easily converts your analog records into digital files and stores them onto a USB memory stick. Using USB memory makes it easy to carry your digital files when you don't have a PC near your record player.

## Features

#### New Features

- · Easily store your record library onto USB memory
- Includes Trans Music Manager, to obtain track numbers and information
- Built-in Phono Equalizer
- Fully automatic player

### • Easily store your record library onto USB memory

Simply insert your USB memory stick into the USB port on the front, press the Start and Record buttons, and the DP-200USB converts your record into digital files. You don't need to have a PC nearby.

When you insert the USB memory stick into a Denon S-52 or RCD-M37, you can enjoy the music files in the high-quality sound that Denon audio products are renowned for. You can also record the music to a USB player that supports MP3 files and enjoy listening to the music directly from the player.

## Includes Trans Music Manager, to obtain track numbers and information

The DP-200USB comes with Trans Music Manager (on CD-ROM) that detects the silent spaces between tracks to automatically split track numbers. You can also use a PC to access the Gracenote® music ID server and obtain track information.

#### • Built-in Phono Equalizer

The DP-200USB's built-in Phono Equalizer lets you enjoy the music on a mini audio system or radio cassette player that does not have a PHONO jack. (The Phono Equalizer can be switched on or off.)

#### Fully automatic player

When you select the 30cm (12") or 17cm (7") record size, the arm automatically moves to the correct position for playing the record, and after it's finished, the arm automatically returns to its original position. This automatic system makes it easy to play records on the DP-200LISB.

#### • Aluminium diecast turntable

The DP-200USB has an aluminium diecast turntable for high inertial mass and stable rotation.

### • Includes MM cartridge

### • "Trans Music Manager" functions;

- -Auto MP3 Splitter : Detects silent part between tracks and automatically tags tracks
- -Manual MP3 Splitter: Manually tags tracks as you wish
- -Auto MusicID Record : automatically enables to record music information including titles
- -Manual MusicID Record : manually enables to record music information including titles

[Required System]

OS; Microsoft® Windows® Vista/XP/2000

# **Trans Music Manager**

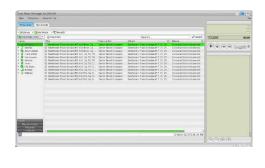

### -Auto Splitter Function-

(Use Trans Music Manager to split tracks recorded from a record.)

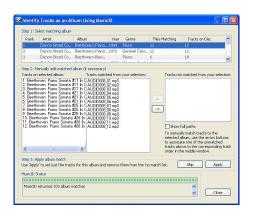

# -Music Library-

(Use Trans Music Manager to save music ID information.)

#### -MusicID Function-

(Use Trans Music Manager to retrieve music ID information such as track title, artist name, etc.)

# -Manual Splitter Function-

(Use Trans Music Manager to manually split tracks of live recordings, etc.)
